Equation `\ref{eq:cosinesimilarity}` represents the cosine similarity between two vectors of features. This similarity measurement takes values in the range of $[0,1]$ [8]. This is an in line expression $a+b=c$.

$$\begin{equation} \cos\alpha = \frac{\hat{A} \cdot \hat{B}}{|\hat{A}| |\hat{B}|} \equiv \frac{\sum_{j=1}^n \hat{A}_j \hat{B}_j}{\sqrt{\sum_{j=1}^n \hat{A}_j^2} \sqrt{\sum_{j=1}^n \hat{B}_j^2}} \end{equation} \label{eq:cosinesimilarity}$$

As [9] states, the most popular similarity metrics are the distance and the cosine similarity. The distance-based metrics include the Euclidean distance, the Hamming distance or the Chebyshev distance, among others.

Equation `\ref{eq:euclidean distance}` displays the Euclidean distance formula.

$$d(x,y)=\sqrt{\sum_{k=1}^n(x_{k}-y_{k})^2}$$

\label{eq:euclidean distance}
